

- Workload orchestrator
 - Containerized applications
 - Non-containerized applications
- Single binary
- Drivers (built-in)
 - Docker
 - Isolated Fork/Exec (exec) → chroot
 - Raw Fork/Exec (raw_exec) → no fs isolation! disabled by default
 - Qemu, Java
- Job (declared workload)
 - Task group(s)
 - task(s) → smallest unit of work

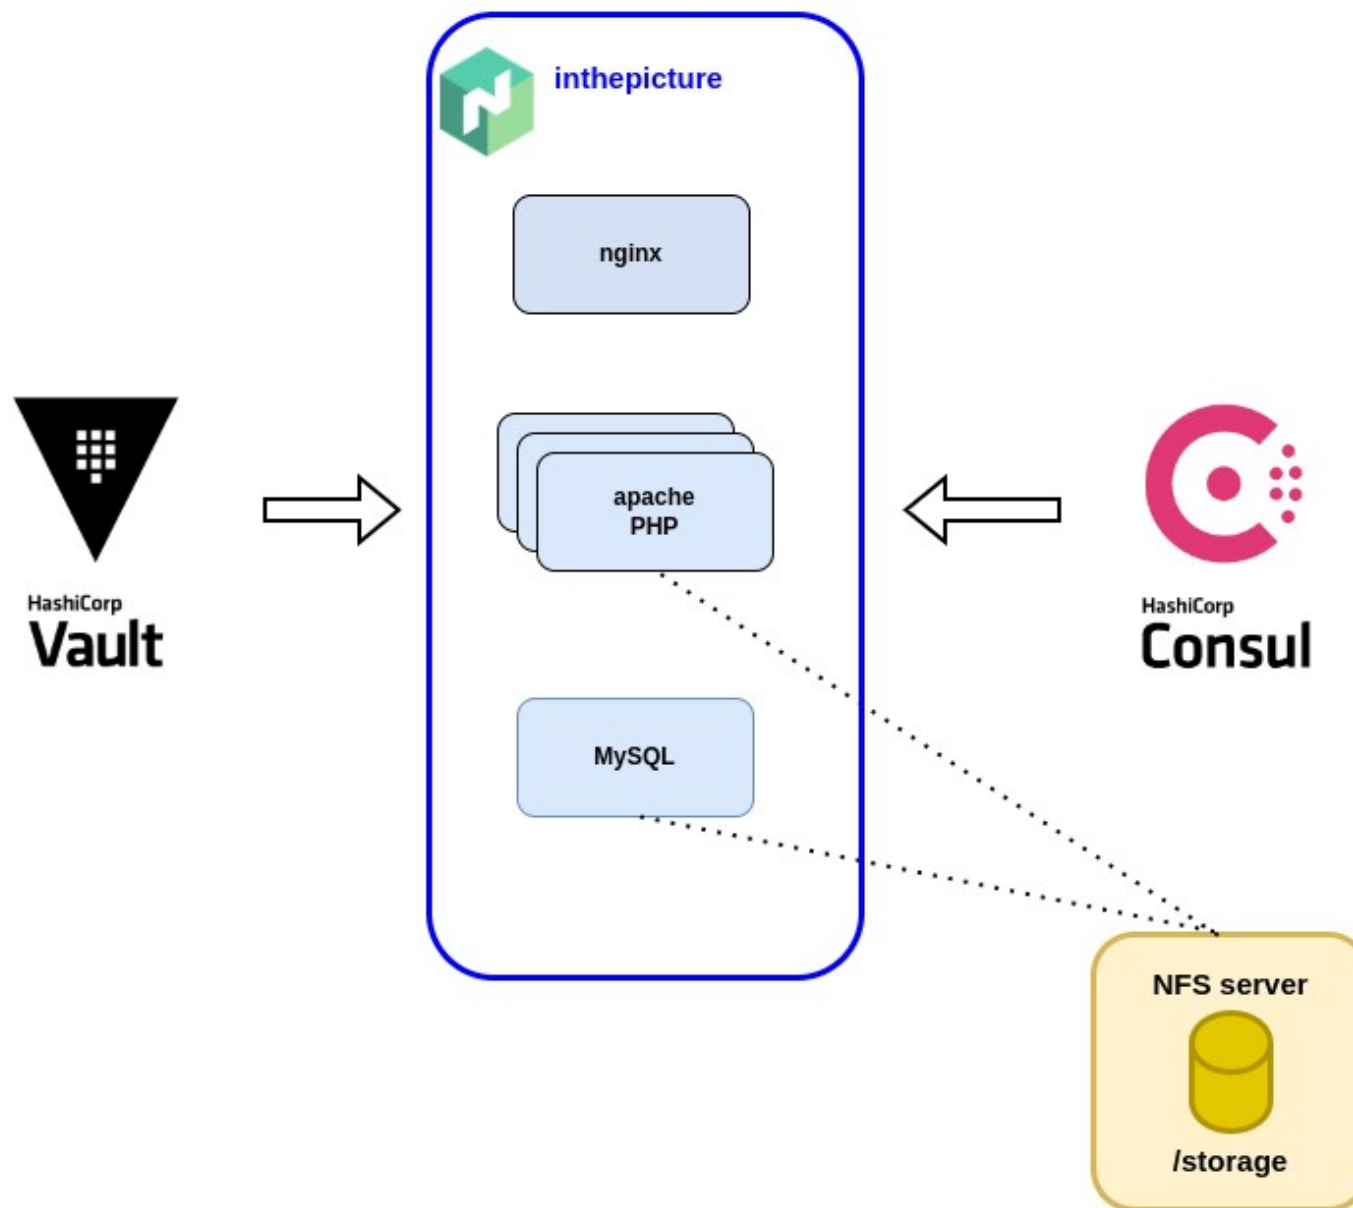

Nomad cluster

- Nomad servers
 - Brains of the cluster
 - Manage jobs
 - Run evaluations
 - Create allocations

- Nomad clients
 - Register themselves with the servers
 - Resources
 - Available drivers
 - Watching for any work to be assigned
 - Executing tasks (workload)

Application

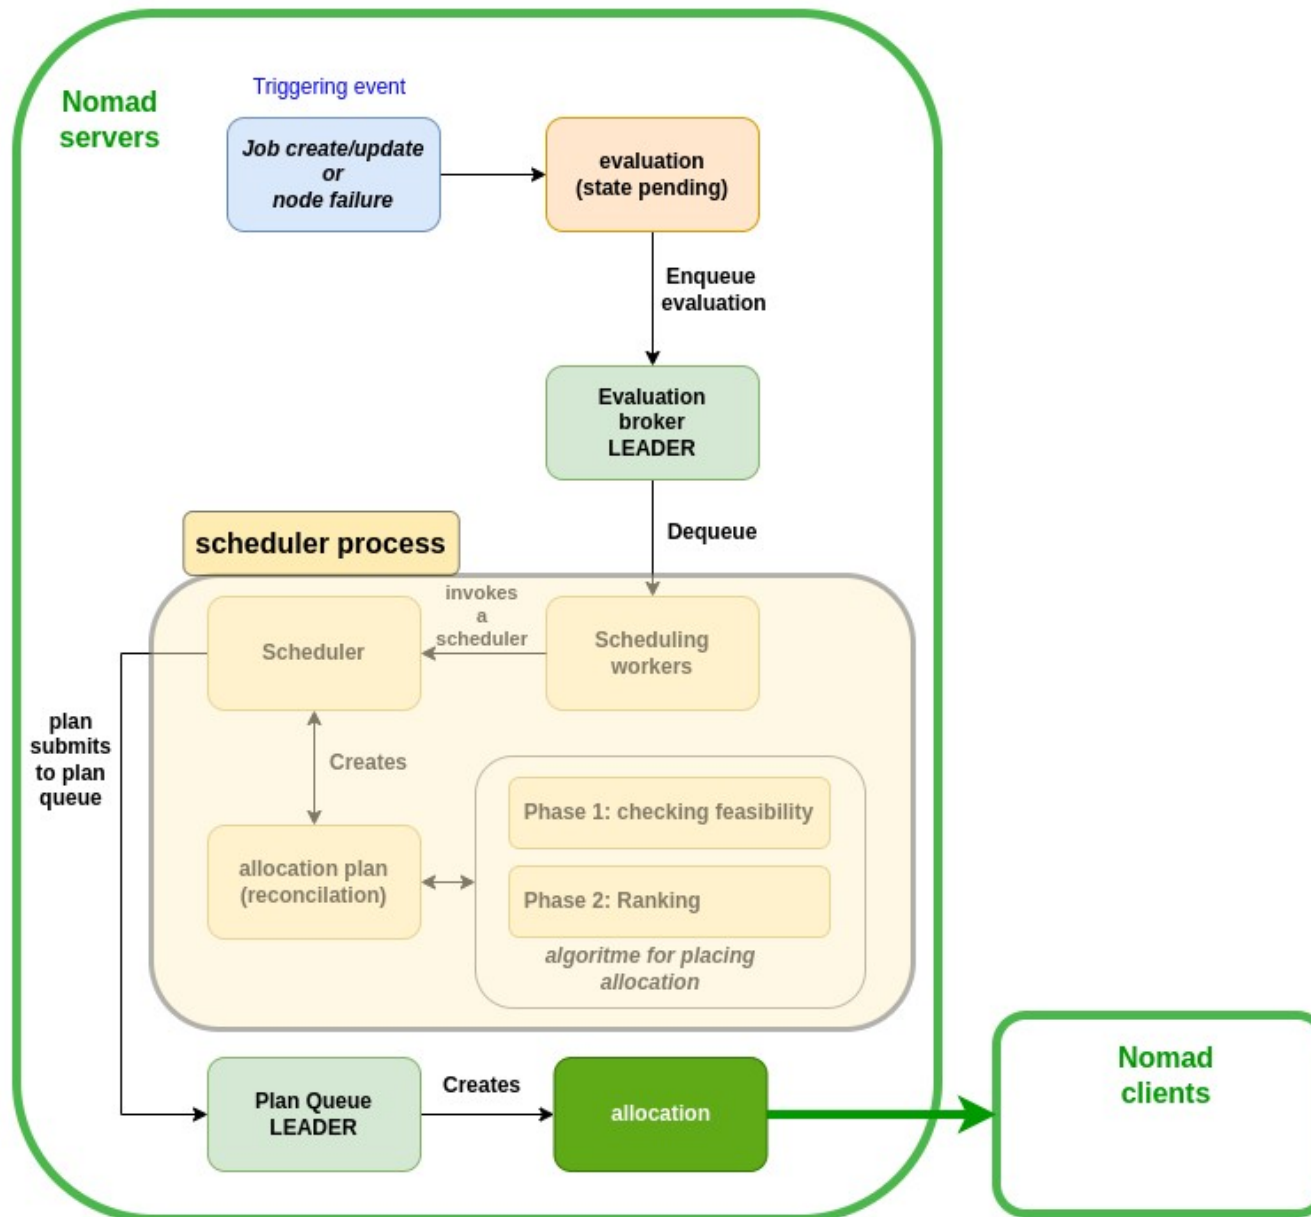

- Requirements
 - Scalable
 - Stateful
 - HA

Nomad - Storage

- Nomad storage (built-in)
 - *ephemeral_disks*
 - *host_volume* (nomad client config)
- Docker volumes (docker driver)
- CSI plugins
 - Third party plugins
 - Manage external storage volumes
 - Types
 - Controller plugins → create volumes
 - Node plugins → create bind mounts on the Nomad client
 - Monolith (controller & node in same instance)
 - Requires privileged containers

Nomad - Scheduling

- Schedulers
 - Batch
 - Service
 - System
 - System batch
